

Dematic InSights

Operations Optimization & Condition Monitoring Platform

Maximize Uptime and Throughput

- ▷ You need smooth and continuous operation, not shutdowns or extra meetings. The slightest anomaly can cause a chain reaction that slows down or even stops the flow of goods to your customers. Identifying potential problems and solving production issues takes precious time and manpower.

Dematic has the solution: Dematic InSights

A smart analytics and condition monitoring platform, Dematic InSights unifies all operational, maintenance, and equipment data within and across facilities. Dematic InSights helps you keep your facility operating at peak performance, maximizing uptime and throughput.

Manage Your Facility to Peak Performance

Dematic InSights gathers data from multiple disparate operation and equipment sources within a facility — and across a network of locations — to provide a single cohesive view of your facility. The Dematic InSights platform includes two products that help you manage your facility.

ANALYTICS FOR OPERATIONS OPTIMIZATION

Offers performance and descriptive analytics, as well as historical-to-current performance and availability dashboards. Analytics incorporates data into visualizations of operational progress, history, and trends and allows you to view order progress, rates, capacity, and cycle times.

You can assign operational and equipment performance thresholds to color-coded status indicators. Key performance thresholds, layered over the current progress dashboard, offer an at-a-glance view of the day's operational performance. These key performance thresholds also offer an end-time estimates based on current fulfillment rates.

Connections in a facility are typically configured for individual systems and equipment. Analytics can assist in pinpointing the exact location of an issue or interruption so you can create a maintenance work order, assign it, track it, and calculate its impact.

Analytics also helps you understand operational and equipment performance over weeks, months and year over year within or between facilities. Identify areas where your facility needs to improve and easily drill down into related data to find root causes. Once you implement improvements, you can use Analytics to track performance to ensure you achieved the desired results.

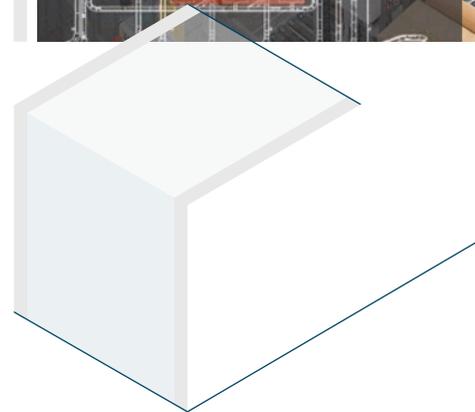

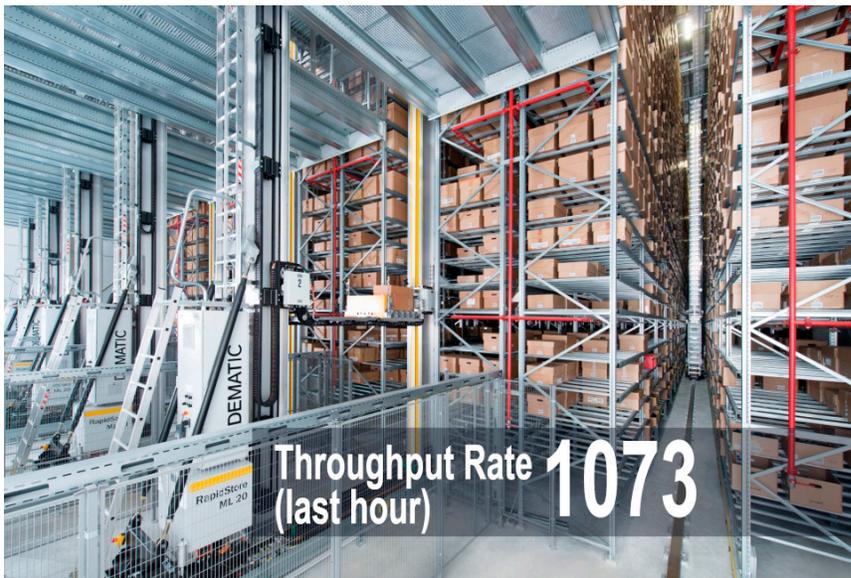

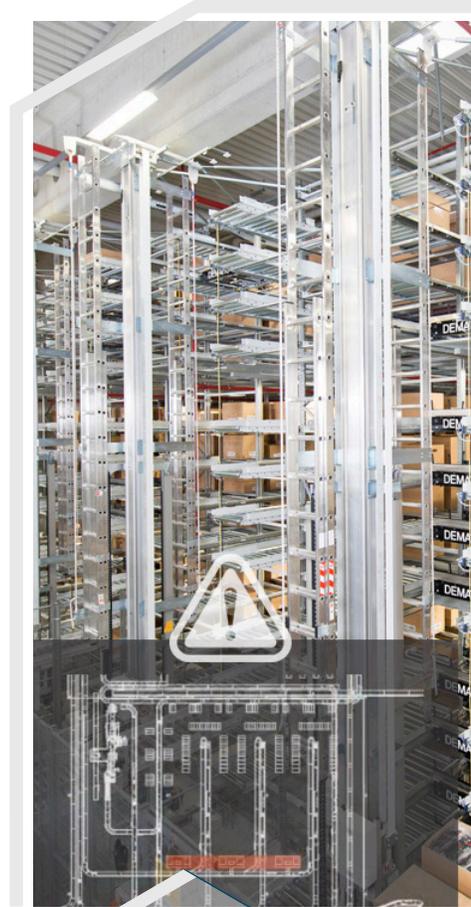

ALERTS FOR CONDITION MONITORING

Provides real-time notifications on equipment and operational performance based on defined thresholds. Alerts notifies users of immediate issues, from downward trends in cycle times, to work-stopping equipment failures.

With Alerts you can calculate and track your Key Performance Indicators (KPIs) by assigning custom operational and equipment performance thresholds by volume, priority, severity or user role. Facility staff receive real-time notifications via text or email so they are aware of potential problems and can proactively take appropriate actions. Configurable workflows automatically escalate notifications to additional individuals or groups if no action is taken.

- ▷ **Alerts and Analytics are available separately or together. You can add other Dematic systems and software offerings after the initial implementation to scale Dematic InSights with your growing business needs.**

The Dematic Difference

Better understand your options

- *Quickly identify problems and understand root causes with powerful, easy-to-use visualizations*
- *See the big picture across your entire operation with data from disparate systems in one place*
- *Find trends across days, weeks and years*

Achieve your business objectives

- *Enhance productivity by identify trending cause-and-effect scenarios*
- *Make smart decisions backed by data*
- *Strategically plan for potential outcomes*
- *Validate whether operational changes produced anticipated benefits*

Manage risk across one or many sites

- *Diagnostic and root-cause analytics using standard connections to existing systems*
- *Single-site or enterprise, multi-site visibility*
- *Eliminate silos across operations, order fulfillment, maintenance and corporate teams*

Minimize unplanned downtime

- *Reduce the time to respond and repair with advanced KPI alert monitoring*
- *Intelligent fault history highlights trouble spots needing attention, in some cases before failure*

Reduce total cost of ownership (TCO)

- *SaaS cloud flexibility, lightweight onsite footprint*
- *Standard connections to existing software systems, devices and equipment*
- *Automatic updates*
- *24/7 standby support included with every subscription*

A Key Component of the Dematic Portfolio

Dematic InSights is key component of a growing software portfolio with the flexibility and scalability to evolve with your business.

Dematic experts take a consultative approach that empowers your people and physical systems to meet the changing demands of the material handling industry.

Gain the competitive edge of best-in-class intralogistics by collaborating with Dematic to enhance the performance of your facility now and into the future.

Other Digital Offerings

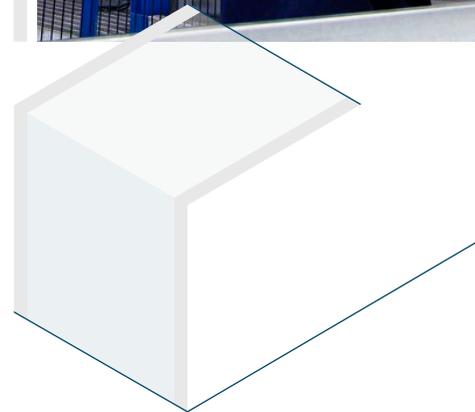

DEMATIC SPROCKET

DEMATIC SPROCKET

Enables enterprise asset management that streamlines and automates maintenance processes to improve reliability, parts and labor tracking, and enterprise-level reporting. Sprocket includes a computerized maintenance management system (CMMS) and enterprise asset management (EAM) functionality that integrates your maintenance processes into a systematic approach to help reduce breakdowns and extend asset life.

With Sprocket you can create, assign, and track preventative maintenance schedules and work orders while monitoring asset inventory, performance, and uptime.

About Dematic

Dematic is an intralogistics innovator that designs, builds and supports intelligent, automated solutions for manufacturing, warehouse and distribution environments for customers that are powering the future of commerce. With engineering centers, manufacturing facilities and service centers located around the world, the Dematic global network has commissioned thousands of customer installations for some of the world's leading brands.

Headquartered in Atlanta, Dematic is a member of KION Group, one of the global leaders in industrial trucks and supply chain solutions, and a leading provider of warehouse automation.

Power the Future of Commerce.
